

Steps Visualization

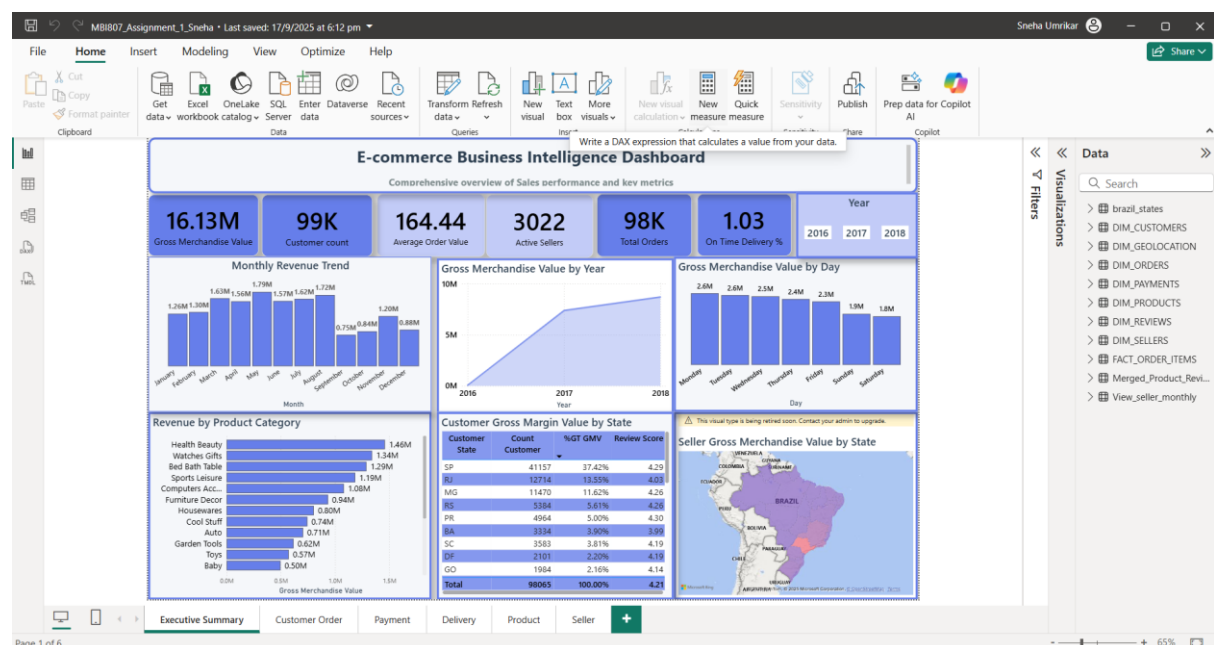

Initially tried all kind of visualization to learn and understand how they work.

Created

1. Executive dashboard for Stakeholders like CEO, Investors
2. Product dashboard for Sales Stakeholders
3. Customer & Order for Customer Support & Marketing stakeholders
4. Delivery dashboard for Sales, Quality Control stakeholders
5. Product for Supply Chain, Sales Seller Relation stakeholders
6. Seller for Seller Relation stakeholders

Insights

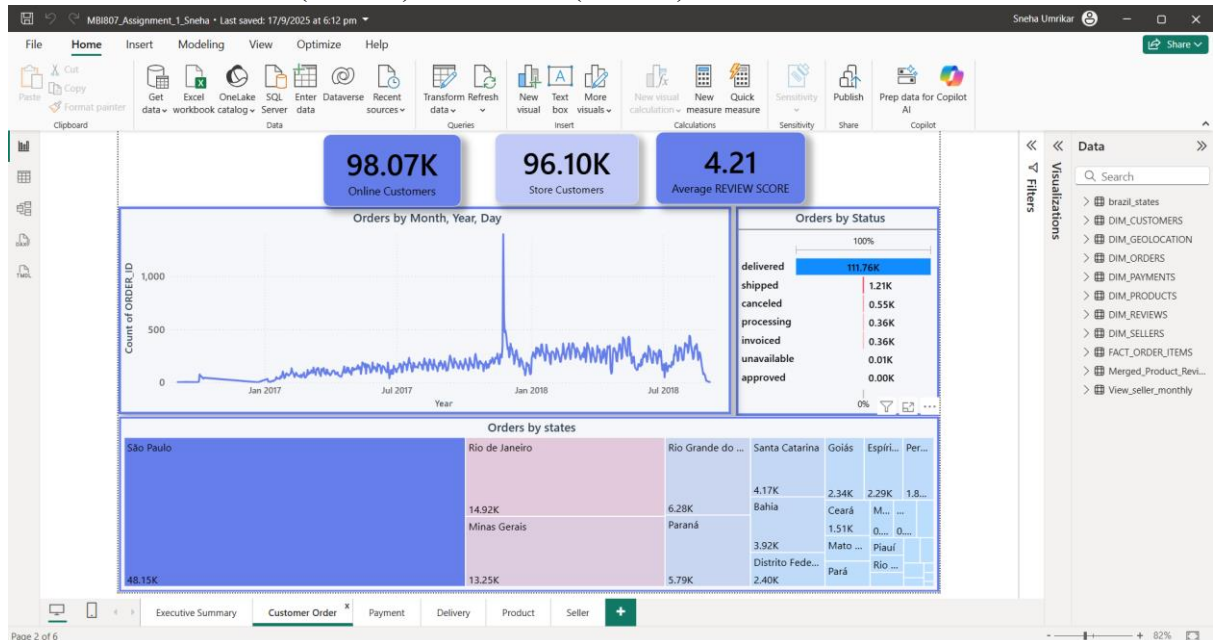

1. Executive dashboard
 - Weekdays show consistently higher sales compared to weekends.
 - Orders increased steadily throughout 2017, peaking in **November 2017** (likely due to holiday promotions/Black Friday).
 - Seller and Customer are concentrated in similar states, Sao Paulo generates highest GMV compared to other states
 - Highest grossing products are from Health & Beauty, Bed Bath Table Sports Leisure category

2. Customer & Order

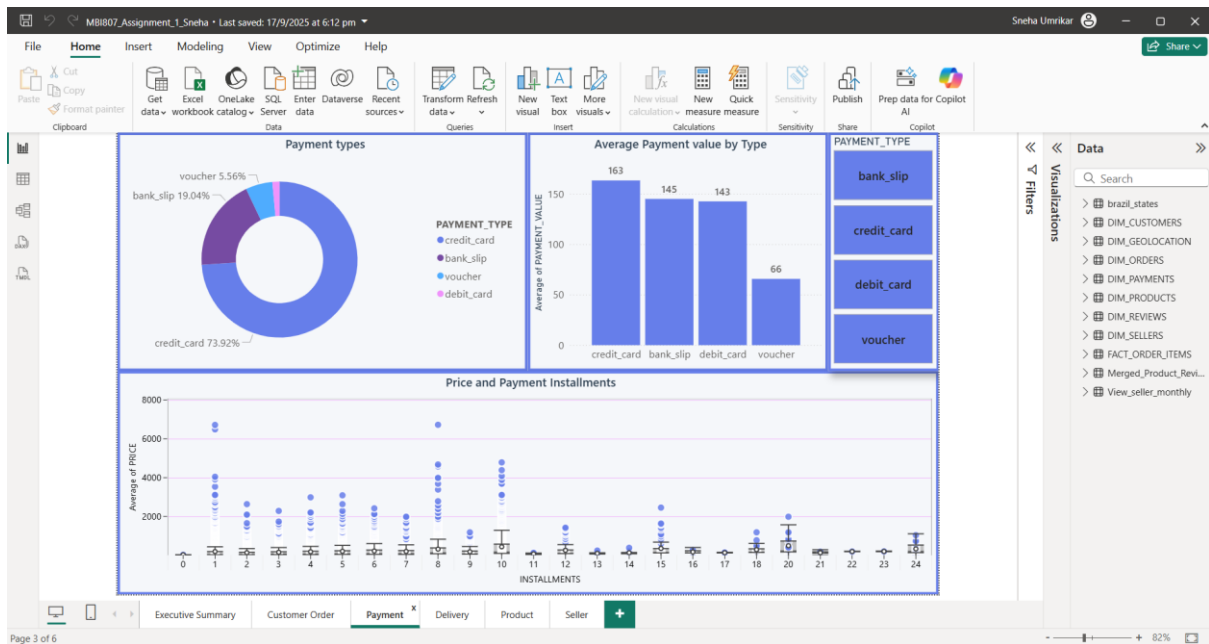

- Vast majority (~99.9%) of orders were successfully **delivered**.
- Only ~550 orders were cancelled, showing high fulfillment reliability.

- A small portion were still “shipped” or “in transit.”
- After mid-2018, sales show a decline likely due to incomplete data rather than a true drop.
- Highest number of orders around 48K is generated in Sao Paulo, followed by Rio de Janeiro (14.92K), and Minas (13.25K)

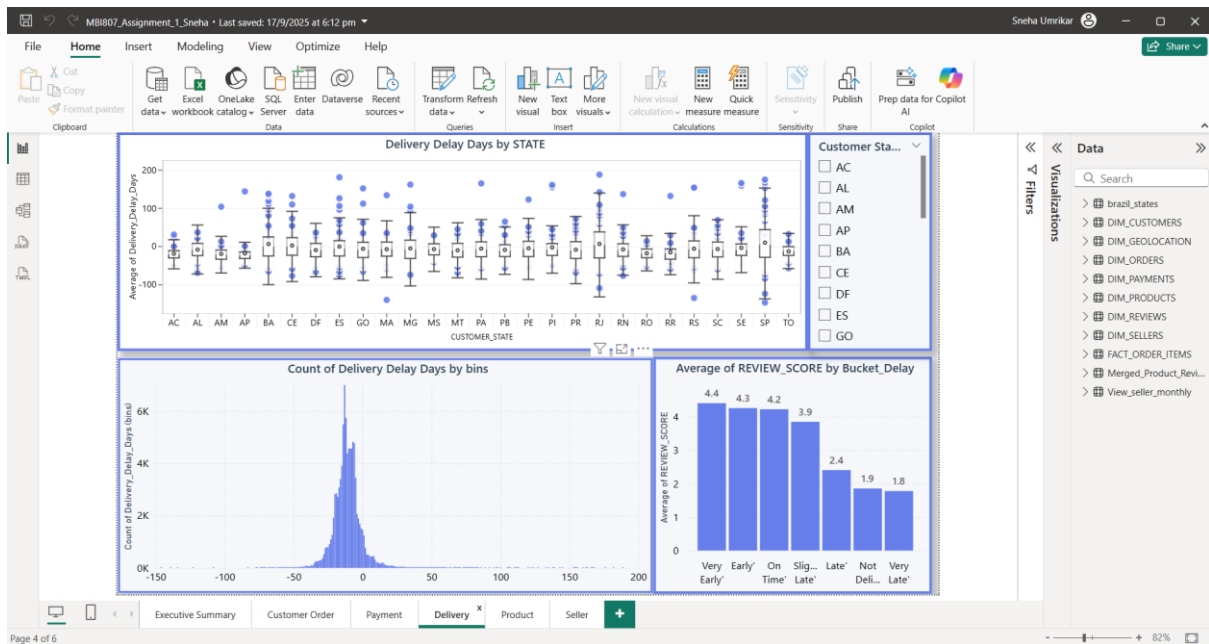

3. Payment

- The vast majority of customers pay with **credit cards (73.8%)**, followed by **bank slips (19.4%)**, **vouchers (5.4%)**, and **debit cards (1.4%)**.
- Credit card purchases are **~25% higher on average** compared to other payment types, suggesting higher-value transactions are typically done via credit.
- As the **number of installments increases**, the **median payment value also increases**, indicating that larger purchases are more often split into multiple payments.
- At lower installment counts, there are significantly more **outliers**, largely due to the sheer volume of small one-time transactions.

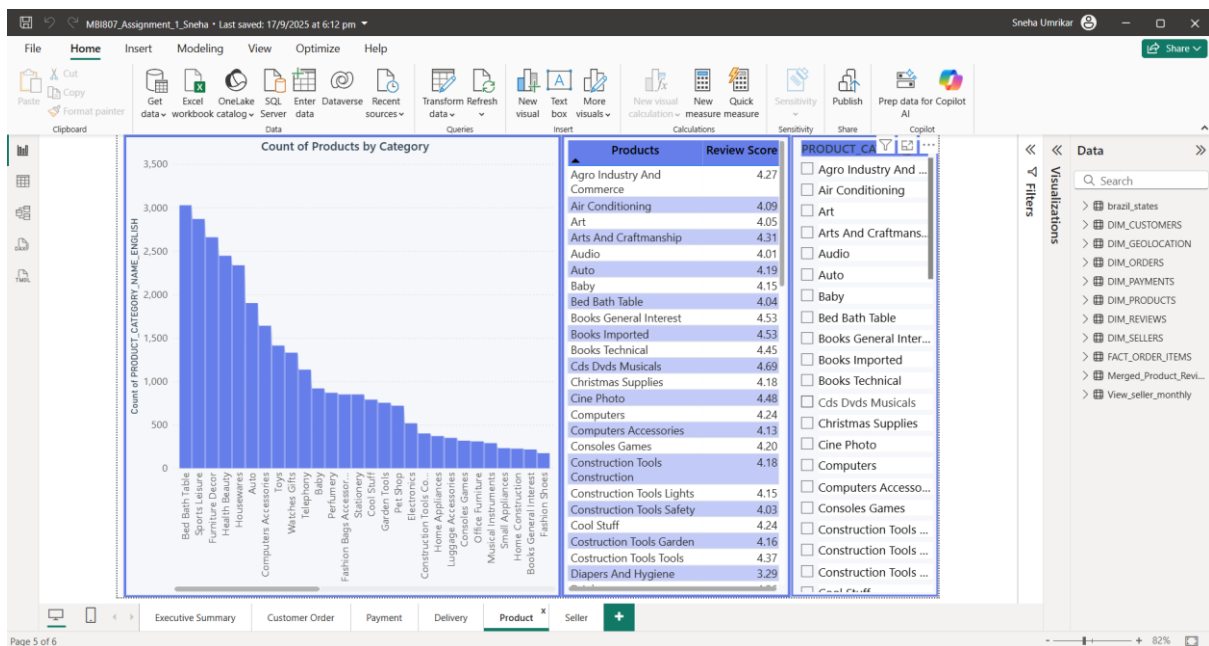

4. Delivery

- Delivery delays vary across states, but no single region consistently dominates in terms of lateness.
- Geographic differences are less impactful than delivery timing categories when explaining customer satisfaction.
- **Review scores decrease steadily as delivery delays increase.**
- On-time or early deliveries receive the **highest ratings**, while very late deliveries result in the **sharpest decline in satisfaction**.
- The **median delivery delay is negative** across most states, meaning orders often arrive **earlier than estimated**.
- However, some states show extreme **outliers** (very late deliveries).

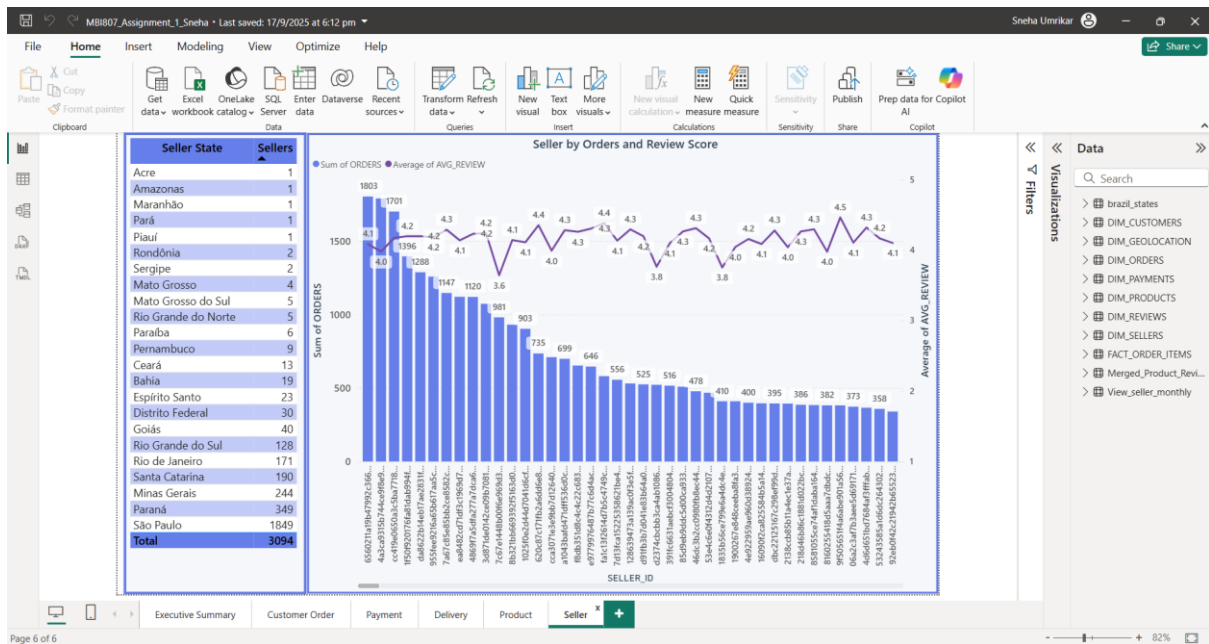

5. Product

- Bed Bath & Table, Sports & Leisure have highest category products with 3000 counts and average Review Score of 4.04
- Differences across categories highlight how **product type influences customer experience**.
- **Household and lifestyle products drive most sales**, and many show strong reviews.
- Monitoring underperforming categories while reinforcing high-scoring ones can help improve **customer retention and trust**.

6. Seller

Recommendations

- **Customer experience:** Focus on minimizing late deliveries to protect reviews.
- **Payments strategy:** Offer and promote installment options in high-priced categories.
- **Operations & marketing:** Stock and advertise more aggressively on weekdays.
- **Logistics optimization:** Further analyze delivery bottlenecks by carrier/region.
- **Upgrade logistics:** Minimize Very Late deliveries (which is directly linked to low review scores) by using regional carriers in outlier areas and implement AI forecasting to increase customer satisfaction by 20%.
- **Marketing tactics:** Target Southeastern Brazil (e.g., São Paulo) with weekday advertisements and add promotions on stock high-revenue products (e.g., health & beauty) and promote underperformers per bundles.
- **Payment enhancements:** Offer installments on high-value products to boost median orders and include debit/voucher as an option in order to access 26.2 non-credit users.
- **Seller management:** Track on-time rates in the sellers of the state of São Paulo and provide training to low-reviewed categories in order to retain them
